

HM Systems introduce revolutionary labelling systems at Interpack 2011

HM Systems will participate at the 2011 Interpack exhibition in Düsseldorf from 12-18 May. The company will among other things demonstrate a new and revolutionary High Speed Linerless labelling dispenser capable of operating without backing paper as well as HM Linerfree Systems® MKII, a new and intelligent linerless print & apply system.

High speed linerless labelling for retail products

The patent pending **HM High Speed Linerfree® dispenser** is able to handle +120 labels/min without backing paper giving a unique possibility of reducing operating costs, doubling running time and efficiencies and simultaneously contributing to a green solution with no waste handling. The new machine can be installed on existing lines enabling upgrades of existing lines to new, green efficient and cost-saving technology.

HM Linerfree Systems® for box labelling

HM will also introduce its new Intelligent **HM Linerfree® MKII printer solution** designed for box labelling. Also, here HM presents advantages such as elimination of backing paper, reduction of CO2 emission, efficiency gain, extreme flexibility and a software solution monitoring operational data.

In addition to these new groundbreaking products, HM will also show its complete program of standard labelling dispensers such as HM 3000 and custom-made labelling solutions spanning from complete high speed labelling systems, Print & Apply systems, print solutions, software and cross web labellers for all known thermoforming machines.

HM Systems will exhibit in hall 08B, booth H62.
