HM Systems

High-end labelling and marking solutions

Profile

HM Systems is an innovative and customer driven company specialized in development, manufacture and marketing of a comprehensive range of products and solutions within industrial labelling and end-of-line solutions.

HM Systems develops and markets end-of-line solutions which in addition to labelling and printing equipment also comprises solutions within barcode verification, software, weighing, checkweighing and inspection,

With extensive experience within construction, electronics and software HM Systems has extensive competencies within integration of solutions. Simultaneously HM Systems has an experienced service organization offering quick response, preventive maintenance, service agreements and 24-hour around-the-clock service.

HM Linerfree® Systems

Patented print and apply system that operates without a liner or backing paper.

The HM Linerfree® system eliminates waste, CO₂ emissions and increases production time by handling self-adhesive paper without a liner. Labels can be applied on top, bottom, front or around corners but with 60% more paper on the same roll, the system is highly efficient requiring fewer rolls changes and making more production time available to users.

HM3000 - Label dispenser for high-speed labelling

High quality dispenser developed for high capacity labelling of retail products. Designed for round the clock operation, label and product changes are quick and easy with excellent repetitive accuracy ensured by the micro-step motor control. As well as standard top and bottom labelling the HM 3000 is able to apply round products and is easily adapted to customised labelling systems.

HM 500 - Highly accurate dispenser for jobs with pre-printed labels

The HM500 is a highly compact dispenser designed to a high specification at a competitive price. With a lot of features of larger machines, the HM 500 offers high accuracy and automatic label detector adjustment and the integrated electronics features a powerful microprocessor which monitors and controls all the dispenser functions. HM 500 is used for retail labelling usually involving pre-printed labels.

HM DS 120 is a compact dispenser which is ideal for basic operations but which can be extended with extra fittings, to develop with the needs of the user. With top, side and bottom labelling using pre-printed labels, the dispenser is often used for retail product labelling e.g. for applying discount labels. HM DS-120 still comes with a strong, stable construction and a body made of anodised aluminium.

HM Print & Apply Systems is a fast growing area for HM which is already supplying customized solution for leading blue chip companies operating in the food, pharmaceutical, construction and building products and other industrial markets. The systems range from simple, low output applicators up to the highly advanced and flexible HM Linerfree® Systems which minimize disruption and maximize efficiency with high-speed packaging operations.

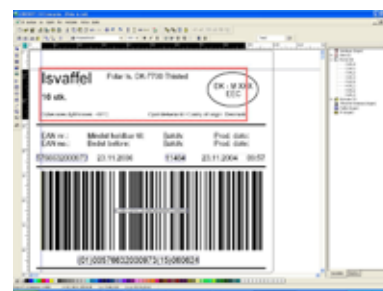

HM CW 4000 - Cross web solutions for vacuum packed products. The HM 4000CW cross web labeller has been specially designed for applying labels on the deep drawing machines used for vacuum packing. The machine was developed to reduce production costs and increase efficiency by enabling packing and labelling to take place in one operation and minimising change-over times and label wastage.

Utilising an HM 3000 dispenser means that thermal transfer and hot stamping units can also be fitted to the system.

HM LabNet Software and net work solutions

With HM LabNet it is possible to easily carry out data collection, production control, down-time analysis and fault finding. Avoid labelling mistakes with software made to meet customer requirement.

Label Design

Smart label programming. Work with more labels at the same time. Design and drawing tools. Label designs with graphics, barcodes and text can easily be designed and modified.

HM PRO A

HMs fast, robust high-end printer which can print print graphics, all known bar codes and features a highly cost-effective ribbon optimization. The PRO A is able to be fitted on most commonly dispenser such as the HM3000 and the HM 4000.

HM intelligent table top printers

Robust high-end gear-driven printers with high capacities, large displays. Operational data can be retrieved at any time. Standard features include USB port for off-line print, SD card reader, RFID prepared and Ethernet as standard.

HM Service

Quick response. Qualified trouble-shooting. 24-7 hotline. Preventive maintenance. Service contracts.

HM Systems has a unique experience within design, development, manufacture and service of custom-made solutions made to our customers' needs

Whether it is advanced high-speed solution for the food industry, more simple systems, single label dispensers or printers, HM has a the right solution:

Labelling systems for dairy products

Automatic labelling of salad products

Side labelling application for plastic bottles

HM Linerfree Systems® for food production

HM 3000 labeller for hi-speed operation

Application for salad production

Cross web solution for fish products

Complete automatic hi-speed labelling line for trays

Print & Apply system for insulation products
